

About Sqrock it solutions

Sqrock IT Solutions is an emerging IT company focused on providing practical learning and real-world industry exposure to students and freshers. Our goal is to help students improve their technical, problem-solving, and professional skills through structured task-based internships.

We work in multiple technology domains, such as:

- Web Development
- Frontend & Backend Development
- UI/UX Design
- Python & Data Science

- Digital Marketing
- Software Development

Python programming

Project Phase 1 (First 15 Days)

As part of the internship program, the monthly tasks have now been divided into **15-day project phases** to provide better learning, proper practice time, and structured development experience.

In this phase, students will be given **4 project tasks**, out of which they are required to complete **any 3 projects** successfully within the given deadline.

The purpose of these tasks is to improve practical development skills, project-building experience, problem-solving ability, and portfolio quality through real-world projects.

Task 1 — AI Chatbot Web Application

Project Objective

Build a modern AI Chatbot Web Application where users can interact with a chatbot through a chat interface.

Features to Include

- Attractive homepage/UI
- Chat interface for user interaction
- User message & chatbot response system

- Responsive design
- Backend integration using Python
- Loading/typing animation
- Chat history section (optional)

Technologies Allowed

Students may use:

- Python
- Flask / Django
- HTML
- CSS
- JavaScript
- React.js (Optional)
- OpenAI API or any chatbot API (Optional)

Bonus Features (Optional)

- Login/Signup system
- Dark mode
- Voice chatbot
- Database integration
- AI response improvement
- Multiple chat themes

Submission Guidelines

Students must submit:

- Source code/project folder
- Project screenshots
- GitHub repository link
- Live hosted link

- Short project description

Important Instructions

- The UI should be clean and responsive.
 - Proper folder structure should be maintained.
 - Avoid directly copying projects from the internet.
-

Task 2 — Hospital Management System

Project Objective

Build a Hospital Management System that helps manage hospital-related operations such as patient records, doctor details, appointments, and billing.

Features to Include

- *Attractive homepage/dashboard*
- *Patient registration system*
- *Doctor management section*
- *Appointment booking system*
- *Billing/payment section*
- *Search functionality*
- *Responsive design*

Technologies Allowed

Students may use:

- *Python*
- *Flask / Django*
- *HTML*
- *CSS*

- *JavaScript*
- *MySQL / SQLite (Optional)*

Bonus Features (Optional)

- *Login/Signup system*
 - *Admin dashboard*
 - *Patient history records*
 - *Prescription management*
 - *Database integration*
 - *Dark mode*
-

Task 3 — Face Recognition Attendance System

Project Objective

Build a face recognition attendance system that automatically detects and marks attendance using face recognition technology.

Features to Include

- *User registration system*
- *Face detection & recognition*
- *Automatic attendance marking*
- *Attendance records section*
- *Camera integration*
- *Responsive UI/dashboard*

Technologies Allowed

Students may use:

- *Python*
- *OpenCV*
- *Flask / Django*
- *HTML*
- *CSS*
- *JavaScript*
- *SQLite / MySQL (Optional)*

Bonus Features (Optional)

- *Admin dashboard*
- *Attendance report export*
- *Email notifications*
- *Real-time face detection*
- *Database integration*
- *Dark mode*

Task 4 — AI Image Generator

Project Objective

Build an AI Image Generator web application where users can generate images by entering text prompts.

Features to Include

- *Attractive homepage/UI*
- *Text prompt input system*
- *AI-generated image output*
- *Image preview section*
- *Download generated image option*
- *Responsive design*

Technologies Allowed

Students may use:

- *Python*
- *Flask / Django*
- *HTML*
- *CSS*
- *JavaScript*
- *AI Image APIs (Optional)*

Bonus Features (Optional)

- *Image history section*
- *Multiple image styles*
- *Dark mode*
- *User authentication*
- *Image gallery*
- *Loading animation*

Final Submission Instructions

After completing the selected projects, students are required to:

- Upload all project source code on [GitHub](#)
- Deploy/host the project online and submit the live project link
- Create a professional project post on [LinkedIn](#) explaining the project, technologies used, and learning experience
- Mention project screenshots or demo images in the LinkedIn post
- Tag Srock IT Solutions in the LinkedIn post

Support & Assistance

If any student faces difficulty while understanding or completing the tasks/projects, they can directly contact the internship coordinator/team for guidance and support.

Students are encouraged to ask questions, clear doubts, and communicate properly whenever needed during the project phase.

Thank You & best wishes.

Thank you for being a part of the internship program at Srock IT Solutions.

We hope these projects help you improve your technical skills, creativity, confidence, and practical development experience. Every project you build will help you grow closer to real industry-level development.

Stay consistent, keep learning, and give your best effort in every task.

Best of luck to all interns for project phase 1!

We wish you success in your learning journey and future career.

Best of luck for your internship journey! - Team
